WARZONE / MW V1

FOR CONTROLLER

INTRODUCTION

Thank you for purchasing the WARZONE / MW PRO SCRIPT V1!

Inside this guide you will learn how to set up and operate the script. This guide will show you how to set up the script for controller inputs on PC! If you are on console, don't worry, this guide will still work for you but you may need to try some different aim assist values if the ones in this guide do not work for you!

HOW TO SET UP

BINDS

In this script, you will need to match some of your binds in-game to the script. This can be done by checking your in-game controller bind set up and matching the Fire/Shoot button (typically R2); the ADS button (typically L2); the Jump button (typically Cross/X); and Crouch (typically Circle). Once you have set up your controller binds, move onto the mods section!

MODS

In the mods section, you will see all the mods the script has to offer. The script has 6 main mods that you have access to change. For starters, we will work on the aim assist section!

AIM ASSIST

For the aim assist, we want to have a very miniscule amount of screen shake. This will still grant you the aim assist, but it won't cause a lot of screen shake which could potentially make your aim worse.

If you are using sensitivies between 1-5 have your aim assist settings as these.

SENS 1-5:   SENS 6-10:
Power: 1.5   Power: 1.7
Radius: 10   Radius: 12
Angle: 125   Angle: 123
RadiusBoost: 10   RadiusBoost: 12
AngleBoost: 10   AngleBoost: 13

SENS 11-15:   SENS: 16-20:
Power: 2   Power: 1.5
Radius: 15   Radius: 15
Angle: 120   Angle: 120
RadiusBoost: 15   RadiusBoost: 15
AngleBoost: 20   AngleBoost: 21

IF IT IS EVER TOO SHAKY FOR YOUR LIKING, LOWER THE POWER AND RADIUSBOOST AND ANGLEBOOST FIRST! THESE SETTINGS WON'T WORK FOR EVERYONE BUT THEY WILL GET YOU SOME GOOD STARTING VALUES! IF YOU NEED ADDITIONAL HELP, MESSAGE ME ON DISCORD AT LevelUpScripts#0001

ANTI RECOIL

For the anti-recoil, you will want to keep the number around 30-40 for most guns. If for some reason the gun is shooting up, increase the number. If it is shooting down, lower the number. You may want to hop into a private match to hone in some good settings before you try it out in an actual game!

To enable and disable Anti Recoil on the fly, on your controller, press and hold L2 and then while still holding L2 down, tap the Left D-pad button and you will see the mod toggle appear on the zen screen. Press the left button until you have selected your intended toggle status (On/Off).

SLIDE CANCEL

The slide cancel mod has been a staple in recent years. If you are looking to improve your quality of in-game movement, the slide cancel mod is a mod to use. This mod can be activated on the fly by holding down L2 on your controller, and while still holding down L2, press the Up D-pad. Press the Up D-pad until you have selected your intended toggle status (On/Off).

BUNNY HOP

The bunny hop mod is another great movement-based mod that is great to use. This can be used in conjunction with the slide cancel mod, and it will greatly increase your chances of the enemy whiffing shots on you. If you have ever faced a person who bunny hops while shooting at you, then you know the potential this mod offers you. This mod can be enabled on the fly by holding down L2 on your controller, and while still holding down L2, press the Right D-pad. Press the Right D-pad until you have selected your intended toggle status (On/Off).

RAPID FIRE !!(WARNING)!!

This mod is probably the single handed most OP mod out of all the ones listed here. This mod will take any semi-automatic rifle and turn it into a full-blown killing machine. This mod features a system that when you hold down R2, will spam R2 at 5 millisecond intervals, making sure that you are shooting a semi-automatic rifle as fast as it can go. Be careful using this, you may get called out in-game so be wary using this mod as it could land you in some hot water;

a great mod to use, nonetheless. You can activate this mod by holding down L2 on your controller, and while holding down L2 press the Down D-pad. Press the Down D-pad until you have selected your intended toggle status (On/Off).

END

Thank you once again for purchasing the V1 Vanguard Script. If you have any troubles at all or need any additional help, message me on discord at **LevelUpScripts#0001** and provide me with proof of purchase so that we can get started on getting this script set up exactly like you want it. This script will most likely be updated in the future so stay tuned for future updates and more! Thanks again!
